NAME
sin, sinf, sinl − sine function

SYNOPSIS
#include <math.h>

double sin(double *x***);**
float sinf(float *x***);**
long double sinl(long double *x***);**

Link with −*lm*.

Feature Test Macro Requirements for glibc (see **feature_test_macros**(7)):

sinf(), **sinl**():
    _ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L
      || /* Since glibc 2.19: */ _DEFAULT_SOURCE
      || /* Glibc versions <= 2.19: */ _BSD_SOURCE || _SVID_SOURCE

DESCRIPTION
These functions return the sine of *x*, where *x* is given in radians.

RETURN VALUE
On success, these functions return the sine of *x*.

If *x* is a NaN, a NaN is returned.

If *x* is positive infinity or negative infinity, a domain error occurs, and a NaN is returned.

ERRORS
See **math_error**(7) for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Domain error: *x* is an infinity
    errno is set to **EDOM** (but see BUGS). An invalid floating-point exception (**FE_INVALID**) is raised.

ATTRIBUTES
For an explanation of the terms used in this section, see **attributes**(7).

Interface	Attribute	Value
sin(), **sinf**(), **sinl**()	Thread safety	MT-Safe

CONFORMING TO
C99, POSIX.1-2001, POSIX.1-2008.

The variant returning *double* also conforms to SVr4, 4.3BSD, C89.

BUGS
Before version 2.10, the glibc implementation did not set *errno* to **EDOM** when a domain error occurred.
