NAME

systemd-hwdb − hardware database management tool

SYNOPSIS

systemd−hwdb [options] update

systemd−hwdb [options] query *modalias*

DESCRIPTION

systemd−hwdb expects a command and command specific arguments. It manages the binary hardware database.

OPTIONS

−−usr
Generate in /lib/udev instead of /etc/udev.

−r, **−−root=***PATH*
Alternate root path in the filesystem.

−s, **−−strict**
When updating, return non−zero exit value on any parsing error.

−h, **−−help**
Print a short help text and exit.

systemd−hwdb [*options***]** update
Update the binary database.

systemd−hwdb [*options***]** query [*MODALIAS*]
Query database and print result.
