NAME
ppdi − import ppd files (deprecated)

SYNOPSIS
ppdi [**−I** *include-directory*] [**−o** *source-file*] *ppd-file* [... *ppd-file*]

DESCRIPTION
ppdi imports one or more PPD files into a PPD compiler source file. Multiple languages of the same PPD file are merged into a single printer definition to facilitate accurate changes for all localizations. **This program is deprecated and will be removed in a future release of CUPS.**

OPTIONS
ppdi supports the following options:

−I *include-directory*

Specifies an alternate include directory. Multiple *-I* options can be supplied to add additional directories.

−o *source-file*

Specifies the PPD source file to update. If the source file does not exist, a new source file is created. Otherwise the existing file is merged with the new PPD file(s) on the command-line. If no source file is specified, the filename *ppdi.drv* is used.
