NAME

   X11::Protocol::Connection::Socket − Perl module base class for IO::Socket−based X11 connections

SYNOPSIS

```
    package X11::Protocol::Connection::WeirdSocket;
    use X11::Protocol::Connection::Socket;
    @ISA = ('X11::Protocol::Connection::Socket')
```

DESCRIPTION

   This module defines *get()*, *give()* and *fh()* methods common to X11::Protocol::Connection types that are
   based on IO::Socket. They expect the object they are called with to be a reference to an IO::Socket.

AUTHOR

   Stephen McCamant <SMCCAM@cpan.org>.
