NAME

Authen::SASL::Perl::LOGIN − Login Authentication class

SYNOPSIS

```
use Authen::SASL qw(Perl);

$sasl = Authen::SASL->new(
  mechanism => 'LOGIN',
  callback  => {
    user => $user,
    pass => $pass
  },
);
```

DESCRIPTION

This method implements the client and server part of the LOGIN SASL algorithm, as described in IETF Draft draft−murchison−sasl−login−XX.txt.

CALLBACK

The callbacks used are:

Client

user
    The username to be used for authentication

pass
    The user's password to be used for authentication

Server

getsecret(username)
    returns the password associated with `username`

checkpass(username, password)
    returns true and false depending on the validity of the credentials passed in arguments.
