NAME
wnpp-check − check if a package is being packaged or if this has been requested

SYNOPSIS
wnpp-check [**−−exact**] *package ...*
wnpp-check −−help|−−version

DESCRIPTION
wnpp-check downloads the lists of packages which are listed as being packaged (ITPed) or for which a package has been requested (RFPed) from the WNPP website and lists any packages supplied on the command line which appear in those lists.

Note that WNPP, and therefore **wnpp-check**'s output, is source package based.

OPTIONS
−−help, **−h**
    Show a summary of options.

−−version, **−v**
    Show version and copyright information.

−−exact, **−e**
    Require an exact package name match, rather than the default substring match.

SEE ALSO
https://www.debian.org/devel/wnpp

EXIT STATUS
0   None of the packages supplied has an open ITP or RFP

1   Either an error occurred or at least one package supplied has an open ITP or RFP

AUTHOR
wnpp-check was written by David Paleino <d.paleino@gmail.com>; this man page was written by Adam D. Barratt <adam@adam-barratt.org.uk> for the devscripts package. **wnpp-check** was originally based on **wnpp-alert**, which was written by Arthur Korn <arthur@korn.ch> and modified by Julian Gilbey <jdg@debian.org> for the devscripts package. Both scripts are in the public domain.
