NAME
git-mergetool--lib − Common Git merge tool shell scriptlets

SYNOPSIS
TOOL_MODE=(diff|merge) . "$(git −−exec−path)/git−mergetool−−lib"

DESCRIPTION
This is not a command the end user would want to run. Ever. This documentation is meant for people who are studying the Porcelain−ish scripts and/or are writing new ones.

The *git−mergetool−−lib* scriptlet is designed to be sourced (using **.**) by other shell scripts to set up functions for working with Git merge tools.

Before sourcing *git−mergetool−−lib*, your script must set **TOOL_MODE** to define the operation mode for the functions listed below. *diff* and *merge* are valid values.

FUNCTIONS
get_merge_tool
    returns a merge tool.

get_merge_tool_cmd
    returns the custom command for a merge tool.

get_merge_tool_path
    returns the custom path for a merge tool.

run_merge_tool
    launches a merge tool given the tool name and a true/false flag to indicate whether a merge base is present. *$MERGED*, *$LOCAL*, *$REMOTE*, and *$BASE* must be defined for use by the merge tool.
