NAME

mcomp – Compares two files using mtools

SYNOPSIS

mcomp *file-on-floppy local-file*

DESCRIPTION

mcomp compares two files, the first one must be on a floppy disk so it can be accessed via **mtools**. It is not strictly necessary on Debian GNU/Linux, because the diffutils **cmp**(1) program provides the same capability after copying the file locally with

mcopy *file destination*

but this utility is provided in the mtools package for other platforms and is retained here for completeness.

AUTHOR

Luis Bustamante <luferbu@fluidsignal.com> wrote this page for the *Debian/GNU* mtools package.
