NAME
codepage − extract a codepage from an MSDOS codepage file

SYNOPSIS
codepage [− *c*] | [− *l*] | − *L*] | [− *a* | *nnn*] <*file.cpi*>

DESCRIPTION
The **codepage** command extracts codepages from an MSDOS codepage file.

OPTIONS
−*c*   Input file is a single codepage

−*L*   Print header info (you don't want to see this).

−*l*   List all codepages contained in the file.

−*a*   Extract all codepages from the file

nnn   (3 digits): extract codepage *nnn* from the file.

EXAMPLE
To create a file 850.cp, with codepage 850 from a file ega.cpi, execute:

codepage ega.cpi 850
