NAME
> Dpkg::BuildProfiles − handle build profiles

DESCRIPTION
> The Dpkg::BuildProfiles module provides functions to handle the build profiles.

FUNCTIONS
> `@profiles` = **get_build_profiles()**
>> Get an array with the currently active build profiles, taken from the environment variable **DEB_BUILD_PROFILES**.
>
> set_build_profiles(@profiles)
>> Set `@profiles` as the current active build profiles, by setting the environment variable **DEB_BUILD_PROFILES**.
>
> `@profiles` = parse_build_profiles($string)
>> Parses a build profiles specification, into an array of array references.
>
> evaluate_restriction_formula(\@formula, \@profiles)
>> Evaluate whether a restriction formula of the form ''<foo bar> <baz>'', given as a nested array, is true or false, given the array of enabled build profiles.

CHANGES
> **Version 1.00 (dpkg 1.17.17)**
>> Mark the module as public.
