NAME
       nmtui − Text User Interface for controlling NetworkManager

SYNOPSIS
       nmtui−edit | nmtui edit {*name* | *id*}

       nmtui−connect | nmtui connect {*name* | *uuid* | *device* | *SSID*}

       nmtui−hostname | nmtui hostname

DESCRIPTION
       nmtui is a curses-based TUI application for interacting with NetworkManager. When starting **nmtui**, the
       user is prompted to choose the activity to perform unless it was specified as the first argument.

       The supported activities are:

       edit
              Show a connection editor that supports adding, modifying, viewing and deleting connections. It
              provides similar functionality as **nm−connection−editor**.

       connect
              Show a list of available connections, with the option to activate or deactivate them. It provides similar
              functionality as **nm−applet**.

       hostname
              Set the system hostname.

       Corresponding to above activities, **nmtui** also comes with binaries named **nmtui−edit**, **nmtui−connect**,
       and **nmtui−hostname** to skip the selection of the activities.
