NAME
       unmkinitramfs − extract content from an initramfs image

SYNOPSIS
       unmkinitramfs [**-v**] *initramfs-file directory*
       unmkinitramfs -h

DESCRIPTION
       The **unmkinitramfs** command extracts the content of a given initramfs image using **cpio**. If the image
       contains multiple segments, each are passed to **cpio** in order.

OPTIONS
       -h   Display usage information and exit.

       -v   Display verbose messages about extraction.

USAGE EXAMPLES
       Extract initramfs content of current running kernel:

       unmkinitramfs /boot/initrd.img-$(uname -r) initramfs/

BUGS
       unmkinitramfs cannot deal with multiple-segmented initramfs images, except where an early (uncom-
       pressed) initramfs with system firmware is prepended to the regular compressed initramfs.

AUTHOR
       The initramfs-tools are written by Maximilian Attems <maks@debian.org> and numerous others.
