NAME
sln − create symbolic links

SYNOPSIS
sln *source dest*
sln *filelist*

DESCRIPTION
The **sln** program creates symbolic links. Unlike the **ln**(1) program, it is statically linked. This means that if for some reason the dynamic linker is not working, **sln** can be used to make symbolic links to dynamic libraries.

The command line has two forms. In the first form, it creates *dest* as a new symbolic link to *source*.

In the second form, *filelist* is a list of space-separated pathname pairs, and the effect is as if **sln** was executed once for each line of the file, with the two pathnames as the arguments.

The **sln** program supports no command-line options.

SEE ALSO
ln(1), **ld.so**(8), **ldconfig**(8)

COLOPHON
This page is part of release 5.02 of the Linux *man-pages* project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at https://www.kernel.org/doc/man−pages/.
