NAME

      acpi - Shows battery status and other ACPI information

SYNOPSIS

      acpi [**options**]

DESCRIPTION

      acpi Shows information from the /proc or the /sys filesystem, such as battery status or thermal information.

OPTIONS

      -b | --battery

            show battery information

      -a | --ac-adapter

            show ac adapter information

      -t | --thermal

            show thermal information

      -c | --cooling

            show cooling device information

      -V | --everything

            show every device, overrides above options

      -s | --show-empty

            show non-operational devices

      -i | --details

            show additional details if available:

            * battery capacity information

            * temperature trip points

      -f | --fahrenheit

            use fahrenheit as the temperature unit instead of default celsius

      -k | --kelvin

            use kelvin as the temperature unit instead of default celsius

      -p | --proc   use the old /proc interface, default is the new /sys one

      -d | --directory <dir>

            path to ACPI info (either /proc/acpi or /sys/class)

      -h | --help   display help and exit

      -v | --version

            output version information and exit
