NAME

exit_group − exit all threads in a process

SYNOPSIS

#include <linux/unistd.h>

void exit_group(int *status***);**

DESCRIPTION

This system call is equivalent to **_exit**(2) except that it terminates not only the calling thread, but all threads in the calling process's thread group.

RETURN VALUE

This system call does not return.

VERSIONS

This call is present since Linux 2.5.35.

CONFORMING TO

This call is Linux-specific.

NOTES

Since glibc 2.3, this is the system call invoked when the **_exit**(2) wrapper function is called.

SEE ALSO

exit(2)

COLOPHON

This page is part of release 5.02 of the Linux *man-pages* project. A description of the project, information about reporting bugs, and the latest version of this page, can be found at https://www.kernel.org/doc/man−pages/.
