NAME
fixcvsdiff − fix problematic diff files

SYNOPSIS
fixcvsdiff [−p] [−b] [*file*...]

DESCRIPTION
fixcvsdiff modifies diff files created from the **cvs diff** command, where files have been added or removed. CVS tends to create diff files that **patch**(1) mis−interprets. The diff file must retain the lines beginning with "Index:" in order for the correction to work.

OPTIONS
−b

Keep a .bak backup file.

−p

Print out the **cvs add** and **cvs remove** commands that must be made after applying the diff, but before running **cvs commit**.

SEE ALSO
diff(1), **patch**(1), **cvs**(1)
