NAME
>   XtRegisterGrabAction − register button and key grabs

SYNTAX
>   void XtRegisterGrabAction(XtActionProc *action_proc*, Boolean *owner_events*, unsigned int *event_mask*,
>   int *pointer_mode*, int *keyboard_mode*);

ARGUMENTS
>   *action_proc*   Specifies the action procedure to search for in translation tables.
>
>   *action*
>
>   *event*
>
>   *params*
>
>   *num_params*   Specify arguments to **XtGrabButton** or **XtGrabKey**

DESCRIPTION
>   **XtRegisterGrabAction** adds the specified *action_proc* to a list known to the translation manager.
