NAME
FcFreeTypeCharSetAndSpacing – compute Unicode coverage and spacing type

SYNOPSIS
#include <fontconfig.h> #include <fcfreetype.h>

FcCharSet * FcFreeTypeCharSetAndSpacing (FT_Face *face***, FcBlanks ***blanks***, int ***spacing***);**

DESCRIPTION
Scans a FreeType face and returns the set of encoded Unicode chars. FcBlanks is deprecated, *blanks* is ignored and accepted only for compatibility with older code. *spacing* receives the computed spacing type of the font, one of FC_MONO for a font where all glyphs have the same width, FC_DUAL, where the font has glyphs in precisely two widths, one twice as wide as the other, or FC_PROPORTIONAL where the font has glyphs of many widths.
