NAME

DPMSGetTimeouts − retrieves the timeout values used by the X server for DPMS timings

SYNOPSIS

cc [*flag ...*] *file ...* -**lXext** [*library ...*]

#include <X11/extensions/dpms.h>

Bool DPMSGetTimeouts

(

Display **display*,
CARD16 **standby*,
CARD16 **suspend*,
CARD16 **off*

);

ARGUMENTS

display   Specifies the connection to the X server

standby

Specifies the current standby timeout in seconds

suspend

Specifies the current suspend timeout in seconds

off   Specifies the current off timeout in seconds

DESCRIPTION

The *DPMSGetTimeouts* function retrieves the timeout values used by the X server for DPMS timings.

The value *standby* is the amount of time of inactivity in seconds before standby mode is invoked. A value of zero indicates that this mode has been disabled.

The value *suspend* is the amount of time of inactivity in seconds before the second level of power savings is invoked. A value of zero indicates that this mode has been disabled.

The value *off* is the amount of time of inactivity in seconds before the third and final level of power savings is invoked. A value of zero indicates that this mode has been disabled.

RETURN VALUES

TRUE   The *DPMSGetTimeouts* function returns TRUE when values are returned.

FALSE   The *DPMSGetTimeouts* function returns FALSE when no values returned.
