NAME

register-python-argcomplete − register-python-argcomplete - argcomplete utility script

DESCRIPTION

usage: register−python−argcomplete [−h] [−−no−defaults]

[−−complete−arguments ...] [−s {bash,tcsh}]
        executable

Register a Python executable for use with the argcomplete module.

To perform the registration, source the output of this script in your bash shell (quote the output to avoid interpolation).

Example:

```
$ eval "$(register-python-argcomplete my-favorite-script.py)"
```

For Tcsh

```
$ eval `register-python-argcomplete --shell tcsh my-favorite-
script.py`
```

positional arguments:

executable
        executable to completed (when invoked by exactly this name)

optional arguments:

−h, **−−help**
        show this help message and exit

−−no−defaults
        When no matches are generated, do not fallback to readline's default completion

−−complete−arguments ...
        arguments to call complete with; use of this option discards default options

−s {bash,tcsh}, **−−shell** {bash,tcsh}
        output code for the specified shell

AUTHORS

argcomplete module was written by Andrey Kislyuk
