NAME
FcFontMatch − Return best font

SYNOPSIS
#include <fontconfig/fontconfig.h>

FcPattern * FcFontMatch (FcConfig **config***, FcPattern ****p***, FcResult ****result***);**

DESCRIPTION
Finds the font in *sets* most closely matching *pattern* and returns the result of **FcFontRenderPrepare** for that font and the provided pattern. This function should be called only after **FcConfigSubstitute** and **FcDefaultSubstitute** have been called for *p*; otherwise the results will not be correct. If *config* is NULL, the current configuration is used.
