NAME

      XtBuildEventMask − retrieve a widget's event mask

SYNTAX

      EventMask XtBuildEventMask(Widget *w*);

ARGUMENTS

      w   Specifies the widget.

DESCRIPTION

      The **XtBuildEventMask** function returns the event mask representing the logical OR of all event masks for event handlers registered on the widget with **XtAddEventHandler** and all event translations, including accelerators, installed on the widget. This is the same event mask stored into the **XSetWindowAttributes** structure by **XtRealizeWidget** and sent to the server when event handlers and translations are installed or removed on the realized widget.
