NAME
>   update−default−ispell − update default ispell dictionary

SYNOPSIS
>   update-default-ispell [−−skip-symlinks] [−−triggered]

DESCRIPTION
>   WARNING: Not to be used from the command line unless you know very well what you are doing.
>
>   This program is intended to be called from ispell dictionary package postinst, from **select-default-ispell** or
>   from dictionaries-common postinst.
>
>   When called under dpkg control with the **−−trigger** option the script is run normally, otherwise the
>   dictionaries-common **update-default-ispell** trigger is enabled for later run.
>
>   With the **−−skip−symlinks** option the symlinks setting is skipped. This is needed for **update-default-ispell** when called from dictionaries-common postinst, since autobuilt hashes may not yet be available.
>
>   When run normally (from the command line or with **−−trigger**) this script rebuilds the info at
>   */var/cache/dictionaries−common/ispell.db* after files under */var/lib/dictionaries−common/ispell*, reads the
>   system default from the debconf database and unless disabled, set default symlinks in
>   */etc/dictionaries−common* pointing to the appropriate files in */usr/lib/ispell/*.
>
>   For ispell this script also updates the system-wide setting */etc/dictionaries−common/ispell−default* and the
>   emacsen, jed, and SquirrelMail support after known info.

OPTIONS
>   −−skip-symlinks Do not try to set symlinks at /etc/dictionaries-common dir.
>   −−triggered   Run all the code instead of trying to enable
>   update-default-ispell trigger
