NAME

what−patch − detect which patch system a Debian package uses

SYNOPSIS

what−patch [*options*]

DESCRIPTION

what−patch examines the *debian/rules* file to determine which patch system the Debian package is using.

what−patch should be run from the root directory of the Debian source package.

OPTIONS

Listed below are the command line options for **what−patch**:

−h, **−−help**

Display a help message and exit.

−v   Enable verbose mode. This will include the listing of any files modified outside or the *debian/* directory and report any additional details about the patch system if available.

AUTHORS

what−patch was written by Kees Cook <kees@ubuntu.com>, Siegfried-A. Gevatter <rainct@ubuntu.com>, and Daniel Hahler <ubuntu@thequod.de>, among others. This manual page was written by Jonathan Patrick Davies <jpds@ubuntu.com>.

Both are released under the GNU General Public License, version 3 or later.
