NAME
       regedit − Wine registry editor

SYNOPSIS
       regedit [*text file*]

DESCRIPTION
       regedit is the Wine registry editor, designed to be compatible with its Microsoft Windows counterpart. If
       called without any options, it will start the full GUI editor.

       The switches are case−insensitive and can be prefixed either by '−' or '/'.

OPTIONS
       −E *file* [*regpath*]
              Exports the content of the specified registry key to the specified *file*. It exports the whole registry if
              no key is specified.

       −D *regpath*
              Deletes the specified registry key.

       −S   Run regedit silently (ignored, CLI mode is always silent). This exists for compatibility with Win-
              dows regedit.

       −V   Run regedit in advanced mode (ignored). This exists for compatibility with Windows regedit.

       −L *location*
              Specifies the location of the system.dat registry file (ignored). This exists for compatibility with
              Windows regedit.

       −R *location*
              Specifies the location of the user.dat registry file (ignored). This exists for compatibility with Win-
              dows regedit.

       −?   Prints a help message. Any other options are ignored.

       −C *file.reg*
              Create registry from *file.reg* (unimplemented).

BUGS
       Bugs can be reported on the **Wine bug tracker** ⟨https://bugs.winehq.org⟩.

AVAILABILITY
       regedit is part of the Wine distribution, which is available through WineHQ, the **Wine development
       headquarters** ⟨https://www.winehq.org/⟩.
